**9696/13**

Paper 1 Core Physical Geography

**October/November 2025**

**1 hour 30 minutes**

You must answer on the enclosed answer booklet.

You will need: Answer booklet (enclosed)  
Insert (enclosed)

---

**INSTRUCTIONS**

- Answer **four** questions in total:  
Section A: answer **all** questions.  
Section B: answer **one** question.
- Follow the instructions on the front cover of the answer booklet. If you need additional answer paper, ask the invigilator for a continuation booklet.
- Sketch maps and diagrams should be drawn whenever they serve to illustrate an answer.

**INFORMATION**

- The total mark for this paper is 60.
- The number of marks for each question or part question is shown in brackets [ ].
- The insert contains all the resources referred to in the questions.

---

This document has **4** pages. Any blank pages are indicated.

**Section A**

Answer **all** questions in this section. All questions are worth 10 marks.

**Hydrology and fluvial geomorphology**

- 1 Fig. 1.1 shows river discharge and flood recurrence intervals for River Logone, Chad, Africa, 1 January 2021 to 1 October 2023.
- (a) Calculate the difference in discharge between the 1.5-year flood recurrence interval and the 10-year flood recurrence interval shown in Fig. 1.1. Show your working. [2]
- (b) Describe the pattern of river discharge shown in Fig. 1.1. [3]
- (c) Explain why the annual hydrograph of a river might vary. [5]

**Atmosphere and weather**

- 2 Fig. 2.1 shows the differences in global average surface temperatures, 1880–2022, from the 1901–2000 average.
- (a) State the maximum negative difference in global average surface temperatures shown in Fig. 2.1. [1]
- (b) Describe the pattern of differences in global average surface temperatures shown in Fig. 2.1. [4]
- (c) Explain the pattern of differences in global average surface temperatures between 1980 and 2022 as shown in Fig. 2.1. [5]

**Rocks and weathering**

- 3 Fig. 3.1 is a photograph which shows a weathered rock.
- (a) Draw a sketch of the weathered rock shown in Fig. 3.1. Label the main features. [4]
- (b) Suggest how **one** process might have weathered the rock shown in Fig. 3.1. [3]
- (c) Briefly explain **one** way that vegetation can weather rocks. [3]

## Section B

Answer **one** question from this section. All questions are worth 30 marks.

### Hydrology and fluvial geomorphology

- 4 (a) (i) Describe the process of stemflow. [3]
- (ii) Explain how river levées are formed. [4]
- (b) Explain how the soils and rock type in a drainage basin might affect the shape of a storm hydrograph. [8]
- (c) 'Wetland and riverbank conservation are the most effective ways of reducing the impacts of river floods.'
- With the aid of examples, how far do you agree with this statement? [15]

### Atmosphere and weather

- 5 (a) (i) Describe how the uplift of air might lead to precipitation. [3]
- (ii) Explain the daytime energy budget. [4]
- (b) Explain why some latitudes experience radiation excesses and some latitudes experience radiation deficits. [8]
- (c) With the aid of examples, to what extent does human activity influence patterns of temperature in urban areas? [15]

### Rocks and weathering

- 6 (a) (i) Describe the process of sea floor spreading. [3]
- (ii) Explain how sheetwash occurs on slopes. [4]
- (b) Describe and explain the formation of volcanic island arcs. [8]
- (c) 'Water is the main cause of mass movement on slopes.'
- With the aid of examples, how far do you agree with this statement? [15]
